

# Axes

## 6 Pound Pickhead Axe with Fiberglass Handle

The Axe tool is used by fire departments who need maximum force and cutting power for a short time. Our axe has a six pound head fire. The weight ensures deep cuts with every swing. The pick (actually referred to as a pall) allows the user to pry through plaster laths, dry wall, etc.

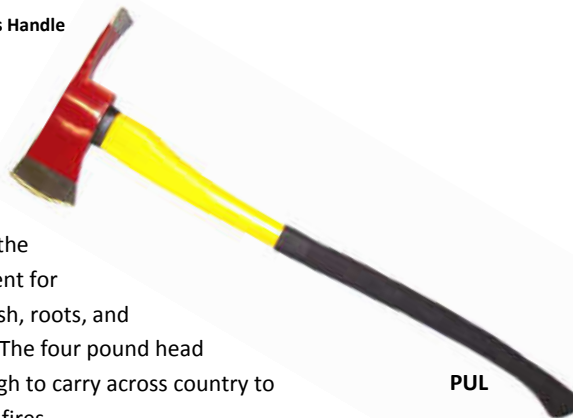

## 6 Pound Flathead Axe with Fiberglass Handle

The flat head axe is used where chopping is the primary need. This axe feels great in your hands and swings well. The 6 lb. head gives the user added force.

## Pulaski Fire Axe with Fiberglass Handle

Primarily used in the forestry service, this versatile axe has many applications. Besides the obvious use as a regular axe, the blade on the back of the head is excellent for cutting through underbrush, roots, and even as a prying surface. The four pound head makes the unit light enough to carry across country to fight the difficult to reach fires.

- All of our axes have fiberglass handles for maximum strength
- A UV inhibitor is included in the gel coat so sunlight will not cause premature aging
- Additionally, the handle is equipped with a large rubber cover to ensure a slip-proof grip when using both hands and/or wet gloves
- The exposed portion of the handle is safety yellow to make it easy to spot at a congested scene
- Axe Heads Red
